

RESPONSE WT

Wet Tolerant

Alfalfa

Profile

Response WT performs well on medium to heavy, or poorly drained soils. A high yielding variety that should be considered in areas of high water table.

Its root system has been genetically designed with a greater degree of the branched rooted trait. This trait helps keep more of the root system above the water table and better secures the plant in the ground when freezing and thawing occurs. The branch-rooted trait will adjust as moisture stresses intensify.

- ✓ Excellent forage quality
- ✓ High yielding branch rooted variety
- ✓ Adjusts its root growth based on level of moisture stress

Resistance to diseases

Bacterial Wilt	<div><div>+</div><div>+</div><div>+</div></div>
