Quick Overview

- Vigorous creeping root
- Yield competitive with tap rooted varieties
- High forage dry matter yield
- For pasture or hay
- Fall dormancy: 2
- Winterhardiness 1.6
- Excellent disease resistance package
- Dense crowns

Selection

Sidewinder is a creeping rooted alfalfa designed for the dryland pastures of Western Canada, but is a true multi-purpose variety that can be used for both pasture and hay. As the alfalfa stand ages, rhizomatous stems fill in the stand. Very good wheel traffic tolerance. Excellent winter survival delivers a long stand life under tough weather conditions. No known soil type or management limitations.

Notes

Features

Anthracnose	High Resistance
Aphanomyces (Race 1)	High Resistance
Bacterial Wilt	High Resistance
Fusarium Wilt	High Resistance
Phytophthora Root Rot	High Resistance
Verticillium Wilt	High Resistance
Aphanomyces (Race 2)	Resistance
Pea Aphid	Resistance
Spotted Alfalfa Aphid	Moderate Resistance
Blue Aphid	High Resistance
Stem Nematode	Resistance
